A box plot comparing the number of children per woman for two groups, labeled 16 and 17 on the x-axis. The y-axis represents the number of children, ranging from 0 to 10. The 16 group (green box) has a median around 3.5, with a box from approximately 2.5 to 4.5 and whiskers from 1.5 to 5.5. The 17 group (purple box) has a median around 2.5, with a box from approximately 2.0 to 3.5 and whiskers from 1.0 to 4.0. Both groups show outliers, with the 16 group having several high outliers (up to 10) and the 17 group having one outlier around 4.5.

A box plot comparing the number of children per woman for two groups, labeled 16 and 17 on the x-axis. The y-axis represents the number of children, ranging from 0 to 10. The 16 group (green box) has a median around 3.5, with a box from approximately 2.5 to 4.5 and whiskers from 1.5 to 5.5. The 17 group (purple box) has a median around 2.5, with a box from approximately 2.0 to 3.5 and whiskers from 1.0 to 4.0. Both groups show outliers, with the 16 group having several high outliers (up to 10) and the 17 group having one outlier around 4.5.

A box plot comparing the number of children per family for two groups, labeled 16 and 17 on the x-axis. The y-axis represents the number of children, with major grid lines at 0, 2, 4, 6, 8, and 10. The group labeled 16 has a green box plot with a median around 4.5, an IQR from approximately 3.5 to 5.5, and whiskers extending from about 2.5 to 6.5. It has several outliers, including one at 10. The group labeled 17 has a purple box plot with a median around 3.5, an IQR from approximately 3.0 to 4.0, and whiskers extending from about 2.5 to 4.5. It has one outlier at 5.5.
